

We started as a small business too.

Founders Grove, Noyce, and Moore, were Intel's technology innovators with vision. They launched Intel as a small business which is now a leading global corporation.

Intel's commitment to social responsibility does not end with the innovation inside our walls. It extends to the people and organizations we choose to do business with.

We develop technology that turns into a powerful ally for small business.

These small businesses represent a sampling of various industries which Intel conducts business with, and does not depict an exhaustive list.
